Unified CSR Desktop………………………………………………………………………….310

Chapter 12: FCR and Csat Technology Enablers Key Messages…………………………312

Index……………………………………………………………………………….314

Notes……………………………………………………………………………320

Acknowledgements

The purpose of the book, *World Class Call Center,* is to help call center managers improve their FCR, Esat and Csat performance. SQM has been benchmarking, tracking and helping leading North American call centers to improve their performance for over 14 years. As a result of benchmarking over 400 call centers and surveying over one million customers and 25,000 CSRs on an annual basis, SQM has gained valuable insights into call center FCR, Esat and Csat performance and best practices.

None of this would have been possible without call centers participating in our benchmarking or tracking studies. So, we would like to thank all the organizations that have participated in our call center benchmarking or tracking studies.

At SQM, we have been fortunate to work with world class call centers and some of the best managers in the call center industry. We would like to thank these managers for sharing their insights into what they consider to be best practices and validating the best practices identified in this book.

To all of our clients who have used our services over the years, we thank you for your business and support. We would also like to give a special thank you and congratulations to all of the award-winning and certified call centers that have been mentioned in this book.

Also, the dedication and support of SQM employees has made call center benchmarking, tracking, awarding, certifying and identifying best practices possible. In closing, we would specifically like to thank our client services, telephone survey representatives, IT and analytical teams for their hard work and dedication.
